DETAILED ACTION

Amendment

The amendment filed 27 March 2006 has been entered into this application.

Response to Arguments

Applicant's arguments/remarks, see pages 10-12, filed 27 March 2006, with respect to the rejection(s) of claim(s) 1, 2, 4, 7-9, 19-22, 24, 27-29, 39-40, and 45-48 under 35 U.S.C. 103(a) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn.

Examiner's Reasons for Allowance

Claims 1-57 are allowed over the prior art of record.

The following is an examiner's statement of reasons for allowance:

As to claim 1, the examiner agrees with the applicant arguments that the prior art of record, taken alone or in combination, fails to disclose or render obvious an actuator for moving the optical element relative to the flow stream such that the light directed by the optical element is aligned with the current position of the core, in combination with the rest of the limitations of the claim. Claims 2-19 are allowable by virtue of their dependency.

As to claim 20, the examiner agrees with the applicant arguments that the prior art of record, taken alone or in combination, fails to disclose or render obvious an actuator for moving the light source relative to the flow stream such that the light directed by the optical element is aligned with the current position of the core flow. Claims 21-39 are allowable by virtue of their dependency.

As to claim 40, the examiner agrees with the applicant arguments that the prior art of record, taken alone or in combination, fails to disclose or render obvious an actuator for moving the flow stream relative to the light source and optical element such that the light directed by the optical element is aligned with the current position of the core flow. Claims 41-57 are allowable by virtue of their dependency.

Additional Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references listed in the attached form PTO-892 teach of other prior art of an optical alignment system for aligning a light beam with a core flow in a flow stream.
